Course syllabus

Endimensionell analys
Calculus in One Variable

FMAA05, 15 credits, G1 (First Cycle)

Valid for: 2019/20
Decided by: PLED F/Pi
Date of Decision: 2019-03-26

General Information

Main field: Technology.
Compulsory for: B1, B11, C1, D1, E1, F1, I1, K1, L1, N1, Pi1, V1, W1
Language of instruction: The course will be given in Swedish

Aim

The aim of the course is to give a basic introduction to calculus one variable. Particular emphasis is put on the role that the subject plays in applications in different areas of technology, in order to give the future engineer a good foundation for further studies in mathematics as well as in other subjects. The aim as also to develop the student’s ability to solve problems, to assimilate mathematical text and to communicate mathematics.

Learning outcomes

Knowledge and understanding
For a passing grade the student must

• within the framework of the course with confidence be able to handle elementary functions of one variable, including limits, derivatives and integrals of them.
• be able to set up and solve some types of linear and separable differential equations that are important in the applications.
• be able to discuss the logical structure of mathematics, in the way it appears e.g. in plane geometry.
• be able to give a general account of and illustrate the meaning of mathematical concepts in calculus in one variable that are used to construct and study mathematical models in the applications.
• be able to account for the contents of definitions, theorems and proofs.
Competences and skills
For a passing grade the student must

- be able to demonstrate a good algebraic computational ability and without difficulties be able to calculate with complex numbers.
- in the context of problem solving be able to demonstrate an ability to independently choose and use mathematical concepts and methods in one-dimensional analysis, and to construct and analyse simple mathematical models.
- in the context of problem solving be able to integrate knowledge from different parts of the course.
- be able to show capability to explain mathematical reasoning in a structured and logically clear way.

Contents

Examination details

Grading scale: TH - (U,3,4,5) - (Fail, Three, Four, Five)
Assessment: Written test in both subcourses, comprising theory and problem solving. The final grade is the integer part of the arithmetic mean value of the two grades on the subcourses. Two computational ability tests. Some oral and written assignments. ONLY STUDENTS WHO PASSED THE TESTS OF COMPUTATIONAL ABILITY AND THE FIRST ORAL ASSIGNMENT MAY PARTICIPATE IN THE FIRST WRITTEN TEST. ONLY STUDENTS WHO PASSED THE SECOND ORAL ASSIGNMENT MAY PARTICIPATE IN THE SECOND WRITTEN EXAM. Four of the exercise sessions during study period 1 are group seminars. By approved participation, including preparations, in at least three of these, the student may get a bonus at the the exam on subcourse B1. The bonus remains valid during the academic year. The group seminars are only open for first year students.

The examiner, in consultation with Disability Support Services, may deviate from the
regular form of examination in order to provide a permanently disabled student with a form of examination equivalent to that of a student without a disability.

Parts
Code: 0119. Name: Computational Ability Test 1.
Credits: 0. Grading scale: UG.
Code: 0219. Name: Computational ability test 2.
Credits: 0. Grading scale: UG.
Credits: 8. Grading scale: TH. Assessment: Written test comprising theory and problem solving. Computational ability tests must be passed before the examination. One assignment (oral and in writing) must be passed before the examination. Contents: See above, part 1.
Credits: 7. Grading scale: TH. Assessment: Written test comprising theory and problem solving. One assignment (oral and in writing) must be passed before the examination. Contents: The whole course, but with emphasis on part 2 above.
Credits: 0. Grading scale: UG.
Credits: 0. Grading scale: UG.

Admission
The number of participants is limited to: No
The course overlaps following course/s: FMA410, FMA415, FMA645, FMAA01

Further information: The course Calculus in one variable is taught and examined in two versions, A (=FMAA01) and B (=FMAA05) respectively, depending on the student’s program. The goals are the same. The present course description is version B. Before the written retake exams it will be possible to retake the tests of computational ability and the oral assignments.
