Course syllabus

Tillämpad matematik - Linjära system
Applied Mathematics - Linear systems

FMAF10, 5 credits, G2 (First Cycle)

Valid for: 2016/17
Decided by: Education Board B
Date of Decision: 2016-03-29

General Information

Main field: Technology.
Compulsory for: D2
Elective for: B4, BME4, C4-ssr, K4, L4-gi, M4, W4
Language of instruction: The course will be given in Swedish

Aim

The aim of the course is to treat some mathematical concepts and methods, above the basic level, that are important for further studies within e.g. mechanics, signal processing, control theory, electrical engineering and for further professional activities.

Learning outcomes

Knowledge and understanding
For a passing grade the student must

- be familiar with and be able to describe different properties of linear systems, and how they can be modelled in the time domain and in the frequency domain.
- be familiar with the Laplace transform and its significance in connection with input/output relations and differential equations, and be well versed in handling simple transform tables.
- have good knowledge of such matrix algebra that is the foundation of eigenvalue problems and of solving systems of differential equations.

Competences and skills
For a passing grade the student must

- be able to show capability to identify problems which can be modelled with the concepts introduced.
- be able to show ability to use the concepts in connection with problem solving.
- with proper terminology, suitable notation, and with clear logic be able to explain the solution to a problem in a well structured manner.

Contents

*Linear systems:* Mathematical models of linear, time invariant systems. Transfer function. Step response and impulse response. The frequency function.

Examination details

Grading scale: TH
Assessment: Written test. Computer sessions.

Parts
Credits: 5. Grading scale: TH.
Credits: 0. Grading scale: UG.

Admission

Admission requirements:

- At least 7 university credits from one of the courses FMAA01, FMAA05 or FMA645

Required prior knowledge: Basic university courses in calculus and linear algebra.
The number of participants is limited to: No
The course overlaps following course/s: FMA030, FMA037, FMA062, FMA450, FMAF05
