Course syllabus

Biomatematik
Biomathematics

FMAN01, 7,5 credits, A (Second Cycle)

Valid for: 2018/19
Decided by: PLED F/Pi
Date of Decision: 2018-03-23

General Information

Language of instruction: The course will be given in English on demand

Aim

The main aim of the course is to give a basic introduction to mathematical theory and methods in biology, with enough scope to enable the student to handle biologically phrased problems. An additional aim is to help the student develop his or her ability in problem solving, both with and without a computer. A further aim is to prepare the student for further studies in e.g. biological systems or evolution biology.

Learning outcomes

Knowledge and understanding
For a passing grade the student must

• be able to present clearly and independently use basic mathematical concepts in biology, in particular regarding cell modelling, evolution dynamics and diffusion phenomena.
• be able to present and give an informal explanation of the mathematical theory behind some central biological models, such as non-linear difference equations, non-linear differential equations and reaction-diffusion equations.

Competences and skills
For a passing grade the student must

• be able to use computer packages to simulate solutions of biological problems.
• be able to show good capability to independently identify biological problems which can be solved with mathematical modelling, and be able to choose an appropriate method.
• be able to independently apply basic modelling to biological problems which are
relevant in industrial applications and research.
• with proper terminology, in a well structured way and with clear logic be able to explain
the solution to a biological modelling problem.

Contents
models. Phase plane methods. Molecule dynamics. The cell cycle. Limit cycles,
oscillations and excitable systems. Modelling of diffusion. PDE-models. Pattern
formation.

Examination details
Grading scale: TH - (U,3,4,5) - (Fail, Three, Four, Five)
Assessment: Compulsory assignments. Approved results on these are enough to pass the
course. To get a higher grade it is required to pass a written and an oral examination.

The examiner, in consultation with Disability Support Services, may deviate from the
regular form of examination in order to provide a permanently disabled student with a
form of examination equivalent to that of a student without a disability.

Admission
Required prior knowledge: Courses in applied mathematics, e.g. FMAF05 and
FMAN55.
The number of participants is limited to: No

Reading list
554950-6.
